# ENTERPRISE CONNECT – A GUIDE

What is Enterprise Connect?

Enterprise Connect is a tool that creates a strong bond between a user's Mac and the Havas network. Additionally, it provides a solution to irritating password changes, wonky keychain popups, and gives the user a real time look at when a password is set to expire, as well as allowing password changes without logging out!

How to Use:

Enterprise Connect's installation will be silent, however, the initial installation will prompt the window to pop up [see the screen shot below]. In the password field provided, enter your computer password and click **Sign In**.

Once Logged In:

After a successful login, Enterprise Connect will sit on the Finder Bar:

When clicked on, it will display:

- **Who you are signed in as**
- **When your password expires**
- **The Change Password option [see screen shot]**

If you do not see the Enterprise Connect icon in the Finder Bar, go into **Applications** and open it. Please direct all inquiries to the Havas Health IT department.
